Re: Five Mile Pass Waste & Excess Rock

Dear Mr. Munson:

The following are issues to be addressed in regard to the above project.

A. Reclamation:

- a. Waste rock would not be needed because of excess material. Also putting material back would not hold top soil that would be spread over the top. This would leave open void spaces for top soil to continue to fall down into these voids. There is enough top soil for reclamation without trying to backfill in this rock.

B. Reducing High Walls:

- a. All high walls will be knocked down or fill dump in front of them to generate a slope effect.

C. Water Retention:

- a. No areas will be left for water to pond.

If you have any further questions, please call.

Sincerely,

Jerry North  
Geologist

JN/awg
